IT IS ESSENTIAL THAT THEY ARE
MANUFACTURED, INSTALLED
AND SPECIFIED CORRECTLY.

Fire Doors for the Health Sector Explained

FIRE DOORS FOR THE HEALTH SECTOR EXPLAINED

Course reference: FD-HS

When it comes to safeguarding patients with a wide range of dependencies, health sector buildings present particular fire safety challenges. It is critical that doorsets within hospital environments serve their purpose with respect to fire resistance and compartmentation to allow for phased evacuation.

Our on the road seminar day has been designed specifically for the health sector. It will present an overview of fire door design, manufacture, testing, installation and certification, including a site tour and discussion.

This course is based on our popular existing Timber Fire Doors Explained course and will cover:

- ➔ Background to Regulatory requirements including: the role of fire doors in progressive horizontal evacuation (Firecode – fire safety in the NHS (HTM 05-02)) and the effect of the RRFSO
- ➔ Anatomy of fire resistant doorsets
- ➔ Installation and maintenance of fire doors
- ➔ Fire testing and the role of assessments
- ➔ Third party certification and the Q-Mark scheme
- ➔ DVD demonstration of a fire door test
- ➔ Site tour and discussion – **NEW!**

The day is aimed at:

- ➔ Facilities, estates and property managers
- ➔ Fire officers
- ➔ Building contractors and installers
